

2nd SSEA Conference

On 12th April 2018, representatives from ESA and ELGRA presented the outline of the highly successful ESA-ELGRA Gravity Related Research Summer School at the 2nd edition of the Symposium on Space Educational Activities hosted in Budapest, Hungary.

During the talk an overview of the summer school, including its background, aims and core learning material were presented, alongside demographics of previous attendees of the first two editions of the school.

ESA & ELGRA released an announcement for the call of the 3rd edition of the summer school, at the conference where we look forward to welcoming the next group of university students in June 2018 and hope to see some of the attendees from this symposium.

The talk generated a lot of interest and questions and went on to win an award of the best paper from the organising committee.

One of the main take home highlights from the symposium was seeing so many students including SELGRA members presenting excellently to their peers at the symposium and the chance to see our great colleagues at ESA Education Office again.
